Shaojin Ding

shjd@tamu.edu, +1-(979)-422-3945
LinkedIn: https://www.linkedin.com/in/shaojin-ding-5b9092162/

Research Interests

- Speech processing, Voice conversion, Object detection, Face recognition

Key Skills

Programming Languages: **Python**, **MATLAB**, C/C++, Ruby, HTML, Javascript
Toolkits: Pytorch, Caffe, TensorFlow, Kaldi, Django

Education

Texas A&M University, College Station, TX, USA
Ph.D. program in Department of Computer Science and Engineering 2016 – 2021 (expected)

Xi'an Jiaotong University, Xi'an, Shaanxi, China
B.S. in Electronic and Information Engineering 2011 – 2015
Special Class for the Gifted Youth 2009 – 2011

Projects

Foreign Accent Conversion (Sponsored by NSF) Fall 2016 – present

- Developed various speech synthesis systems that modify non-native English speech to have native accents.
- Focused on sparse representation based methods and deep neural network based methods.

Golden Speaker Builder Web Application (Sponsored by NSF) Fall 2016 – present

- Developed an interactive online tool for L2 learners to build a personalized pronunciation model: their own voice producing native-accented speech.
- The application is developed based on a Django+MATLAB framework.

Object Detection in Hazy Images Spring 2018

- Proposed a region proposal feature restore algorithm on top of Faster R-CNN for hazy image object detection.

Face Verification in Unconstrained Conditions Fall 2014 – Spring 2016

- Proposed a CNN layer to extract global to local facial features concerning the feature of the whole image and specific areas including eyes, nose and mouth.
- Integrated the proposed layer into Google's FaceNet to extract facial features, and implemented Joint-Bayesian face verification model.
- This algorithm achieved 3rd place in the Face Detection and Verification task in National Smart-City Video Parsing Competition.

Typing correction model for Touchscreen Keyboards Jul. 2014 – Sep. 2014

- Designed an unsupervised online learning algorithm that is able to continuously learn the keyboard typing pattern. The algorithm is adaptable to specific users, and the learned pattern helps to eliminate typing errors.
- The algorithm has been integrated to Microsoft Bing IME for Android.

Experiences

Research Assistant Fall 2016 – present

PSI Lab, Department of Computer Science and Engineering, TAMU.

Advisor: Dr. Ricardo Gutierrez-Osuna

- Conducted research on speech processing, voice conversion, and accent conversion.

Research Assistant Fall 2014 – Spring 2016

Institute of Artificial Intelligence and Robotics, Xi'an Jiaotong University.

Advisor: Dr. Jinjun Wang

- Conducted research on face detection and verification.

Intern Jul. 2014 – Sep. 2014

Wireless and network group, Microsoft Research Asia, Beijing, China

Advisor: Lead Researcher Jacky Shen

- Conducted research on Typing correction model for Touchscreen Keyboards.
